ENVIRONMENTAL GUIDANCE Royal Mail

Version: 1.0 Issue: 4 January 2022 First issued: 5th August 2021

PLEASE NOTE: The details within this guide are taken directly from Royal Mail's published environmental guidance document first issued on the 5th August 2021

Introduction

The Mail Materials and Recyclability Guidance in this document is applicable to Advertising, Business Mail and Subscription Mail products for both sorted, and unsorted where applicable, options.

Please note:

Machineable specifications take precedence over any permitted designs or pack construction. This will supersede the existing Responsible (Sustainable) mail specification. Unwrapped or naked mailings are permitted and must meet the published specification.

Index

The Requirements are noted by Product: Business Mail [**B**], Advertising Mail [**A**] including Partially Addressed, and Publishing including Subscription Mail [**P**]. Suppression files advice is included to cover unsolicited mailings sent using Business Mail

Introduction

Requirements	В	Α	Р
1. Improving targeting	В	Α	Р
For Business Mail mailings, the requirements in this section (1) are mandatory for unsolicited			
mailings and optional for standard mailings.			
1.1 Suppression Files			
1.1.1.			
Where data is not from a consent-based file you must maintain a documented procedure for suppressing customer and prospect data against the Mail Preference Service (MPS) and the			
MPS deceased file. a. For Partially Addressed mailings our recommendation is to use 2 years' worth of recent			
registrations.			
 b. The process for suppressing customer and prospect data must be in place and files checked thirty days or less before the item that uses the data is posted with Royal Mail. c. For mail produced overseas where the transit time to the UK is greater than thirty days, mailing files should be checked for recency thirty days or less before the items are despatched to Royal Mail and transit time to the UK should be no longer than ninety days. 			
All applicable for unwrapped			
1.1.2.			
The data for each mailing must be validated against at least two of the DMA accredited suppression files ¹ .	В	A	
Applicable for unwrapped			
1.2 Address Quality	В	Α	Р
1.2.1.			
All items must be addressed in accordance with Royal Mail's Postcode Address File™ (PAF™).			
A minimum of at least 90% of all items must be fully and accurately addressed and			
postcoded.			
Applicable for unwrapped			
1.2.2	В	Α	Ρ
Recommended a minimum of a least 95% postcode and address quality ²			
Applicable for unwrapped			
2. Sustainable resources and materials	В	Α	Ρ
2.1 PAPER Outer			
2.1.1. Recycling			
All paper products used in your posting;			
a. must not be made from greaseproof or silicone paper or components and,			
b. must be sourced from paper mills that operate an environmental management			
system conforming to BS EN ISO 14001 and/or the Eco- Management and Audit			
Scheme (EMAS) ³ and,			
c. must contain recycled fibre from recovered waste paper and/or,			

¹ In order to be recognised as an accredited data suppression provider a company must be a DMA member. To be a DMA member the data suppression providers must pass the independent audit specified by the DMA. The audit assesses the accuracy and quality of the data and current data protection compliance regulations.

² Premium level

³ Most Western European paper mills confirm to these standards and paper suppliers should be able to provide supporting documentation upon request. The specification will be updated to reflect any changes in standards published by DEFRA after leaving the EU.

 d. be virgin fibre⁴ sourced under a certified chain of custody conforming to a certification scheme approved by the Defra funded Central Point of Expertise on Timber Procurement (CPET) and, e. All paper elements of your posting, including padded envelopes, must be recyclable. This means all paper elements must be able to be captured and separated from a waste stream for conversion or reuse and be recovered by the majority of local authorities at household level and, f. contain recycled wood fibre is that recovered from pre-consumer waste paper and post-consumer waste paper and g. adhere to these five certification schemes that have been approved as satisfying the UK Government's requirements for sustainable and legal timber: Forest Stewardship Council[®] (FSC[®]) Canadian Standards Association (CSA) Malaysian Timber Certification Council (MTCC) Programme for the Endorsement of Forest Certification[™] (PEFC[™]) 			
All applicable for unwrapped 2.1.2. Windows	В	A	P
If the mailpiece has a window;			
a. Windows are permitted, if less than 5% of the full pack weight, as they can be			
recycled			
b. Glassine ⁵ windows, if untreated i.e. pure and not siliconised, are permitted			
c. No silicone or greaseproof window material			
Not applicable for unwrapped			
2.1.3. Outer Message to be clearly visible to the recipient	В	Α	Р
a. The outer logo must provide clear guidance to the recipient that the mail piece should			
and can be recycled. The recommendation is to use the commonly used logo shown			
on The On-pack Recycling Label Ltd <u>www.oprl.org.uk</u> (Recycle) or indicate the item is			
paper.			
Please note OPRL labels can only be used by members of the scheme			
Recycle			
b. The same 'recycle' ⁶ logo can be used on both window and non-window paper envelopes			
All applicable to unwrapped			

 $^{^{\}rm 4}$ Virgin fibre is wood fibre that has not been used before.

⁵ Glassine is considered to be tracing paper by the Confederation of Paper Industries (CPI) but is 'pulpable' so is permitted

⁶ The On-pack Recycling Label (OPRL) give a 2-year window to change the recycling print/logo. www.oprl.org.uk

2.1.4. Construction and production	В	A	Р
a. No glitter	_		·
b. Minimal metallic foil is permitted i.e. a foil seal			
c. No waxed or wax coated papers			
d. No laminate finishes in the posting. This requirement means that laminate finishes			
must not be used in any part of the posting i.e. it is not just the outer elements of the			
posting but the contents as well			
e. All paper products in your posting must be produced using non-chlorinating bleaching			
methods. For clarity;			
 Non- chlorinating bleaching methods include Elemental Chlorine Free, 			
Processed Chlorine Free and Total Chlorine Free including oxidizing and			
reductive bleaching			
 Chlorinating bleaching methods are those that use elemental chlorine. 			
Applicable to unwrapped			
2.2. POLY Outer	В	A	Р
2.2.1 What are acceptable?			
The key requirements are that the plastic can be identified as recyclable and recycled by citizens			
through normal kerbside waste collections.			
a. Non-biodegradable plastics ⁷			
b. Conventional plastics whether fossil fuel or bio- derived ⁸			
These can be recycled and re-processed			
Not applicable to unwrapped			
2.2.2 What are not acceptable?	B	A	P
All plastics whether fossil or bio based which are designed to bio-degrade or be compostable are			
excluded because of the restricted opportunity for citizens to recycle and propensity for these			
plastics to enter, and contaminate, standard plastic recycling streams.			
a. Biodegradable ⁹ plastic (including oxo-degradable plastics)			
b. Non-biodegradable compostable ¹⁰ plastics			
c. Bioplastics ¹¹ or fossil fuel plastics designed to biodegrade			
Not applicable to unwrapped			
2.2.3 Outer message	В	A	Р
a. The outer logo must provide clear guidance to the recipient that the outer should and			
can be recycled. The recommendation is to use the commonly used logo shown on The			
Please note OPRL labels can only be used by members of the scheme			
DECYCLABLE			
		1	
On-pack Recycling Label Ltd <u>www.oprl.org.uk</u> (Recycle) Please note OPRL labels can only be used by members of the scheme			

⁷ Non-biodegradable cannot be broken down by natural organisms. This poly is durable and lasts for years but can be recycled in current plastic and packaging recycling streams. These plastics are not source specific

⁸ Fossil fuel based plastics (also called petro based polymers) are derived from petroleum or natural gas

⁹ Can be broken down by microorganisms into water, natural gases (e.g. CO2) and methane and biomass. Biodegradiblity depends strongly on the environmental conditions. No standard facilities for citizens to access for recycling.

¹⁰ Although durable and long lasting these need undergo biodegradation under industrial composting conditions but cannot biodegrade naturally.

¹¹ Starch blends (waste or native unprocessed starch is compounded with polymers and, or, compatibilisers, plasticisers, processing aids and fillers) which are essentially a bio-based plastic, those made from polymers derived from plant based sources e.g. starch cellulose, oils, lignin and fossil-based plastics designed to biodegrade

 a. No glitter b. Minimal metalic foil is permitted i.e. a foil seal c. No silicone, greaseproof or glassine d. No polylactic acid (PLA) liners e. No bagasse, palm fibre, rice straw, wheat straw, barley straw, oats straw and other plant fibres f. No mixed plastics g. No laminate finishes in the posting³. This provision means that laminate finishes must not be used in any part of the posting i.e. it is not just the outer elements of the posting but the contents as well h. If using black plastic, 'Carbon Black' pigment is not permitted i. Any plastic envelopes (including polywrap if within permitted spec below) used are only permitted if they are composite multi-layer laminate with European quality standard BS EN643, or plastic content up to 5% or less of pack weight on single sided laminates Not applicable to unwrapped 3. Contents/inserts - solicited¹² and unsolicited¹³ mail These apply to both paper and poly wrapped items and are separated into 'solicited' and 'unsolicited' mailings. a. All paper elements must meet the paper outer specification above b. All plastic elements must meet the poly outer specification above c. No household samples due to machine constraints d. No glass is permitted e. No textiles f. No foil or aluminum g. Single composite items are permitted i.e. paperclip, coins 3.2 Unsolicited mailings a. All paper elements must meet the paper outer specification above (both) b. All plastic elements must meet the paper outer specification above (both) c. No textiles f. No foil or aluminum g. Single composite items are permitted i.e. paperclip, coins 3.2 Unsolicited mailings a. All paper elements must meet the paper outer specification above (both) b. All plastic elements must meet the paper outer specification above (both)	2.2.4	Construction and production	В	Α	Р

¹² Solicited mail is an item which has been selected and paid for by the recipient e.g. a magazine subscription

¹³ Unsolicited mail would include mailings which have not specifically been selected and paid for by the recipient, this would include partially addressed mailings or those which contain unexpected (by the client) gifts or tokens

a. Water soluble varnishes are permitted as are de-inkable ¹⁵	В	Α	Ρ
b. Other readily de-inkable ¹⁶ inks are permitted			
c. Electroinks/HP Indigo inks are not permitted			
d. Inks which cause 'red sock syndrome' cannot be used for example; water based flexo inks,			
inkjet inks and inks using water soluble dyes or pigments unless evidence can be provided			
that they can be de-inked in standard de-inking plants.			
All applicable to unwrapped			
6. Adhesives	В	Α	Ρ
t is important to understand which recycling processes could potentially be involved. The following			
guidance can only be general because each adhesive system will have its own advantages and			
disadvantages depending on the particular recycling processes involved.			
a. Hot melt glue ¹⁷ has two types; pressure sensitive and non-pressure sensitive.			
Non pressure sensitive adhesives are permitted.			
Pressure sensitive adhesives are not permitted.			
b. PUR (Polyurethane reactive) adhesives are permitted			
c. Adhesives which do not plasticise at temperatures below 68° C are permitted			
d. Water soluble ¹⁸ adhesives are not permitted			
All applicable to unwrapped		<u> </u>	
7. Finishes	В	A	P
a. No PVC coating or components (Polyvinyl Chloride)			
b. Foil block printing with no more than 30% of the external surface is permitted		1	1
c. Only one side of a sheet of paper can be laminated, preference is no lamination			
c. Only one side of a sheet of paper can be laminated, preference is no lamination			
 c. Only one side of a sheet of paper can be laminated, preference is no lamination d. No varnish of any kind Applicable to unwrapped 8. Provenance and validation 	В	A	P

¹⁴ Most literature produced in Europe is litho printed, deinking plants were designed for deinking litho. This process works well for gravure print. Magazines are fine, even with digitally printed address label or paper wrap and inserts, in the deinking system. There are some water-based inkjet inks and UV cured that can be deinked in standard deinking plants and have been tested and certified as such.
¹⁵ Not every water based varnish is deinkable

¹⁶ De-inkable and recyclable are not interchangeable. Something might be recyclable but not suitable for de-inking

¹⁷ Both types of hot melt are insoluble in water so dispersal during the pulping process can be problematical. Pressure sensitive can soften in the pulper to form 'stickies' that, if not removed, can travel through the mill filter system and stick to the finished paper product. Non pressure sensitive adhesives have previously demonstrated dispersal as larger particles during processing that are easier to remove during screening.
¹⁸ Water soluble adhesives will build up in concentration in the recycling pulping process over time.

¹⁹ Within Royal Mail our hygiene products are National Change of Address files and we have Suppress that is used to remove records where people have moved home and then Update which provides peoples new address where we've captured the appropriate permissions.
